PEARLESCENT PIGMENTS  
BY PRITTY

Pritty's new TechnoGrey pearlescent pigments raises the bar high for exceptional metallic like pearlescent pigments without the use of colorant.

TechnoGrey is remarkably close to the look of powdered aluminum, extremely shiny with impressive opacity and as it is completely inert there are no explosive hazards and is completely compatible with waterborne applications.

TechnoGrey is outstanding for powder coating with excellent opacity and metallic effects with ~5% dosage as well as for spray-free injection molding such as for automotive parts, electronic / electric appliances and so on with excellent heat tolerance of 300°C for 10 minutes.

Other applications requiring high opacity with a metallic aluminum powder effect are printing inks, screen printing, and decorative uses.

Pritty also offers custom made TechnoGrey for cosmetic and food grades.
